

# MENINGOCOCCAL VACCINE **B**

## Having the meningococcal B vaccine (Bexsero®) today?

### **Has your baby had a dose of paracetamol?**

Children under 2 years should have a dose of paracetamol 30 minutes before Bexsero vaccine administration or as soon as possible after immunisation.

### **Do you have paracetamol at home?**

Your child will need at least 2 more doses of paracetamol after they are immunised with Bexsero to reduce the risk of high fever.

**Ask your immunisation provider or doctor about paracetamol administration.**
