

Fact Sheet

Reporting options in the NAUSP Portal

This fact sheet outlines the different types of reports that are available for extraction from the NAUSP Portal.

Types of reports

Data may be reported as total-hospital (acute inpatient areas excluding Emergency Department and theatre/recovery), Critical Care and non-Critical Care, or by select ward/location. Please refer to the tables below for specific report outputs.

Before you run your reports

- > Please ensure your most recent data submission is complete. Missing data will result in “tailing off” occurring to curves in charts.
- > Check that you are selecting a relevant benchmark group. We generally recommend your National Peer Group for the most appropriate comparisons.

Delivery of reports

In general, reports will be emailed to you within 10-15 minutes, however on occasion there may be delays. If you do not receive your report within an hour, or a report is needed urgently, please contact the NAUSP team at Health.NAUSPhelp@sa.gov.au for assistance.

Frequently asked questions

Why is there no comparator rate for some reports? Theatre and recovery and Hospital in the Home locations are not benchmarked due to the variation in denominator make-up between sites. Emergency Department pre-pack reports are also not benchmarked due to inconsistent data loading (units or prepacks) within and across contributor hospitals.

How many hospitals are in my benchmark group? Each report’s introductory text will state the selected comparator and how many hospitals’ data have been included.

NAUSP is funded by the Australian Government of Department of Health and Aged Care and is administered by the Communicable Disease Control Branch, Department of Health and Wellbeing, South Australia.
